Vending machine

Need Many students get hungry during class so we thought a good business plan would be a vending machine on how to feed students in quench their hunger

We will buy a vending machine and then stock it once a week with items

We will take note of which items sell out the fastest in which items don't really sell in a document and then we will add more stuff that sells and similar items to that stuff and remove items that don't really sell

You also have survey links on the vending machine so people can put their input of what they want in the vending machine

We will get snacks from cheap places and then sell them with according prices to reach good profit margins

We could Take Apple pay so that will up our rates because most vending machines do not take Apple pay so that will up our rates and also we will be the only vending machine in the school so students won't have anywhere else to go so we can charge more for our items Due to supply and demand
