

ITD110 - Web Page Design I
Reading Quiz - TCP/IP Intro
2025-2026

The maximum possible score on this quiz is 5 points.
In the gradebook, it will be weighted 5 points.

Selection Questions: 1 point each correct answer. There are five total correct answers.

1. Assume that I want to send a large message from one computer to another over the internet. Which is true about this process?
 - (a) The message is divided into small chunks called "packets".
 - (b) The transmission requires a dedicated physical connection that can not be shared until the transmission is complete.
 - (c) The message always arrives at the destination in one piece and in the correct order.
 - (d) Information is never lost during transmission.
2. Which of these statements about layers in the TCP/IP model is true?
 - (a) Every message on the internet chooses the most appropriate layer to use.
 - (b) Every message on the internet travels through every layer.
 - (c) Each layer represents a different area of engineering that is required to make the internet function.
 - (d) The model has only two layers, and they are called TCP and IP.
3. Which of the following statements are true about routing in a network?
 - (a) Routers help direct packets towards their destination.
 - (b) Packets may take different paths to reach the same destination.
 - (c) Packets always travel through the shortest route.
 - (d) The router modifies the data in the packet.
