

ITD110 - Web Page Design I
Reading Quiz - Binary
2025-2026

The maximum possible score on this quiz is 5 points.
In the gradebook, it will be weighted 5 points.

TCP/IP Model: 2 Points

1. The four layers of the TCP/IP Model are: Internet, Transport, Network Interface ("Link"), and Application.

On the back of this page, draw the TCP/IP diagram with the layers in the correct order.

Multi-Select Questions: 1 point each correct answer

Each of the following questions might have multiple answers. Select any or all answers that are correct

2. The 1's and 0's in the binary number system can represent many things in a computer program. What of these could be represented by a single bit?
 - (a) Whether an email is read or unread
 - (b) The temperature of the CPU
 - (c) The on/off state of a light bulb
 - (d) The number of files in a folder
3. What of these statements about the binary number system is true? (Our traditional number system that is based on 10 digits is called "decimal").
 - (a) The binary and decimal number systems have nothing in common.
 - (b) Each additional digit in a binary number (eg going from a 3 digit number to a 4 digit number) doubles the number of values it can hold.
 - (c) Each position in the binary number system relates to a numeric value.
 - (d) The binary number system can not represent every integer.
